

TFT LCD BREAKOUT 2.4" WITH TOUCHSCREEN

Weight 31 g

DESCRIPTION

This compact yet powerful breakout board brings your Arduino projects to life with its crystal-clear 2.4" TFT display, allowing you to showcase your creativity in vivid detail. But that's not all - with built-in touch sensitivity, navigating menus, selecting options, and interacting with your creations becomes as intuitive as a tap or swipe. Whether you're designing a sleek user interface for your latest gadget or crafting an immersive gaming experience, this module offers the sensitivity and precision you need to captivate your audience.

Furthermore, integrating this breakout module into your Dasduino projects is very straightforward. Plus, with its SPI communication interface, you can easily exchange data between your Dasduino board and the display, unleashing your creativity without the hassle of complex wiring.

So whether you're dreaming of a futuristic control panel, designing a personalized weather station, or building a portable gaming console, the TFT 2.4" breakout module is your gateway to a world of captivating visuals and seamless interaction, all powered by Dasduino. Say hello to vibrant displays, touch-sensitive magic, and endless creativity - all in the palm of your hand.

FEATURES

- Display type: LCD TFT
- Display size: 2.4"
- Communication: SPI
- Dimensions: 70 x 54 mm / 2.8 x 2.1 inch
