

AUXILIARY ARM FOR ELECTRONICS

Weight 349 g

DESCRIPTION

The auxiliary arm is a practical desktop tool that allows you to hold PCBs, components, and wires when soldering or working with them. Thanks to the crocodile clips adjustable in all directions, you can attach any type of material and adjust it to an accessible position. The arm itself is heavy and will not move during work. In addition, the third arm, as it is also called, has a magnifier with LED lighting on it, so working with small components will be even easier. If that's not enough, there is also a soldering iron holder on this auxiliary arm.

- **Number of crocodile clips:** 2
- **LED lighting powering:** 3x AAA batteries

FEATURES

- Number of crocodile clips: 2
- LED lighting powering: 3x AAA batteries
